About Me

Holder of a Masters in Artificial Intelligence and Data Science, and currently completing a Masters in AI and Healthcare Engineering, I will be seeking a job opportunity starting in September 2026, following the completion of my work-study program at Santé publique France. Motivated and detail-oriented, I am eager to contribute to high-impact projects and to fully integrate into your team with professionalism and enthusiasm.

Education

Master's in Health Engineering and Artificial Intelligence, Marie & Louis Pasteur University — 2025 - 2026

MSc in Artificial Intelligence and Data Science, Faculty of Science and Technology of Tangier — 2023 – 2025

Bachelor in Computer Science, Faculty of Science and Technology of Tangier — 2020 – 2023

Experience

Santé publique France, **Data Engineer / Data Scientist** — September 2025 – Present

- As a work-study trainee, designed and developed **ETL pipelines** for processing and analyzing public health data.
- Designed **interactive dashboards and visualizations** for epidemiologists to support analysis and decision-making.
- Implemented and optimized a **PostgreSQL database** for efficient data storage, structuring, and access.

APM Terminals, **IT Operations Intern** — Febuary 2025 – July 2025

- Developed an IT solution to optimize yard management strategy using metaheuristic and genetic algorithms to maximize operational efficiency.
- Develop **ML Models** to predict and forecast various KPI's.

Digital Place, **Data Science Intern** — July 2024 – August 2024

- Participated in the development of a labor market analytics platform as part of an engineering team.
- Built an **NLP pipeline** to extract **skills** from **resumes** and **job postings** in **French**.
- Improved existing **data cleaning pipelines** using **RegEx** and **Apache Spark**.

Kiinov, Developer Intern — April 2023 – August 2023

- Developed a **full-stack inventory management application** using the **MEAN stack** (**MongoDB**, **ExpressJS**, **Angular**, **NodeJS**).

Skills

Machine Learning: Pytorch, scikit-learn, LLM, NLP
Programming Languages:R, Python ,Java, C/C++, JavaScript/TypeScript
Databases:DBT, Postgres ,MySQL, MongoDB, ChromaDB (Vector Database)
Application Development: Shiny,Angular, Node.js, FastAPI
DevOps: Linux, Git/GitHub, Docker ,Apache Airflow
Software Design: UML

Languages

English: C1 (TOEFL iBT 104)
French: C1 (TCF)

Projects

Lung Cancer Detection using CNN

- Developed a lung cancer detection model based on **CNNs** using **Transfer Learning** and **Pytorch**.

Medical Data Space

- Medical data integration and exploration platform, based on FHIR standards, with a robust backend and interactive UI for search and visualization.

FSTT Chatbot – Fine-Tuned RAG

- Team project: NLP-based **chatbot** using **Python** and **Gemma LLM**, integrating **Fine-Tuning** and **Retrieval-Augmented Generation (RAG)**.

Real-Time Twitter Sentiment Analysis

- Built a **real-time sentiment analysis system** using **Big Data** and **Apache Kafka Stream API**.
- Created a **Dashboard** to **analyze** and showcase **prediction results**.
